In this course, participants will explore a variety of video capture, movie making and animation apps on iPads to create video clips, and create a short video using design thinking as a creative approach to problem-solving.

This course will include a workshop day (5.5hrs) and a follow on component (4.5hrs) for a total of 10 hours.

The follow-on component includes designing a lesson, incorporating film technology and creating a short video.

Current thought leaders agree that 21st century video technology is leading a communication revolution set to fuel “the biggest learning cycle in human history” (Anderson, 2010).

In this introductory course, teachers will uncover the learning potential of digital video production through collaborative exploration of a variety of tablet apps and access to online resources. Participants will engage with current research and investigate pedagogical strategies that encourage students towards meaningful engagement with media technologies and support their shift from media consumers to media creators.

The explosion of digital media technologies has fundamentally shifted how we perceive and engage with our world. Resources and information can be shared like never before, new audiences reached, and innovation unlocked through cycles of inspiration and collaboration. We now all have the potential to be active, creative participants in rich global communities within this new landscape. The implications of this for learning are staggering.

Today’s children have powerful educational and creative resources literally in the palms of their hands and at their fingertips. What an opportunity we have to work with them towards a critical and creative engagement with our world!

In this course, participants will explore a variety of video capture, movie making and animation apps on iPads to create video clips, and create a short video using design thinking as a creative approach to problem-solving.
